

TRANSACTION ARCHITECTURE BASED ON “FIDUCIARIES” COMPLIANT WITH GDPR, PSD2, PARIS CALL, and GOOD SENSE

GLOBAL TAXONOMY

The major challenge is harmonizing labels and meanings among:

- Taxonomies – ACTUS, ISO-LEI, XBRL, Open-Contracting, GA4GH, Akoma ...
- Standards – ISDA, INCO, Kantara, FIDIC,
- Smart Contracts – Hyperledger, Accord Project, OpenLaw.io ...
- Models – Galion, NVCA,
- NLP/AI – RAVN, KMStandards, LexPredict, Seal Software
- **And the masses of existing contracts, permits, pleadings, regulations and laws:**
 - Hundreds of languages and jurisdictions
 - Thousands of purposes
 - Millions of preferences
 - Billions of instances

CONVERTING THE MASSES OF DOCUMENTS, USES, USERS

- Provide a much more effective ecosystem for creating, negotiating, managing and standardizing legal documents. Respecting autonomy, and difference, enabling efficiency.
 - Compatible with current document practices (Word, CRM, etc.)
 - Legal document and clause libraries available on GitHub (Prose)
 - Private term sheets of parameters and differences, linked Prose:
 - Forms
 - Sections
 - Clauses
 - Use-Cases
 - Alternatives
 - Code integration

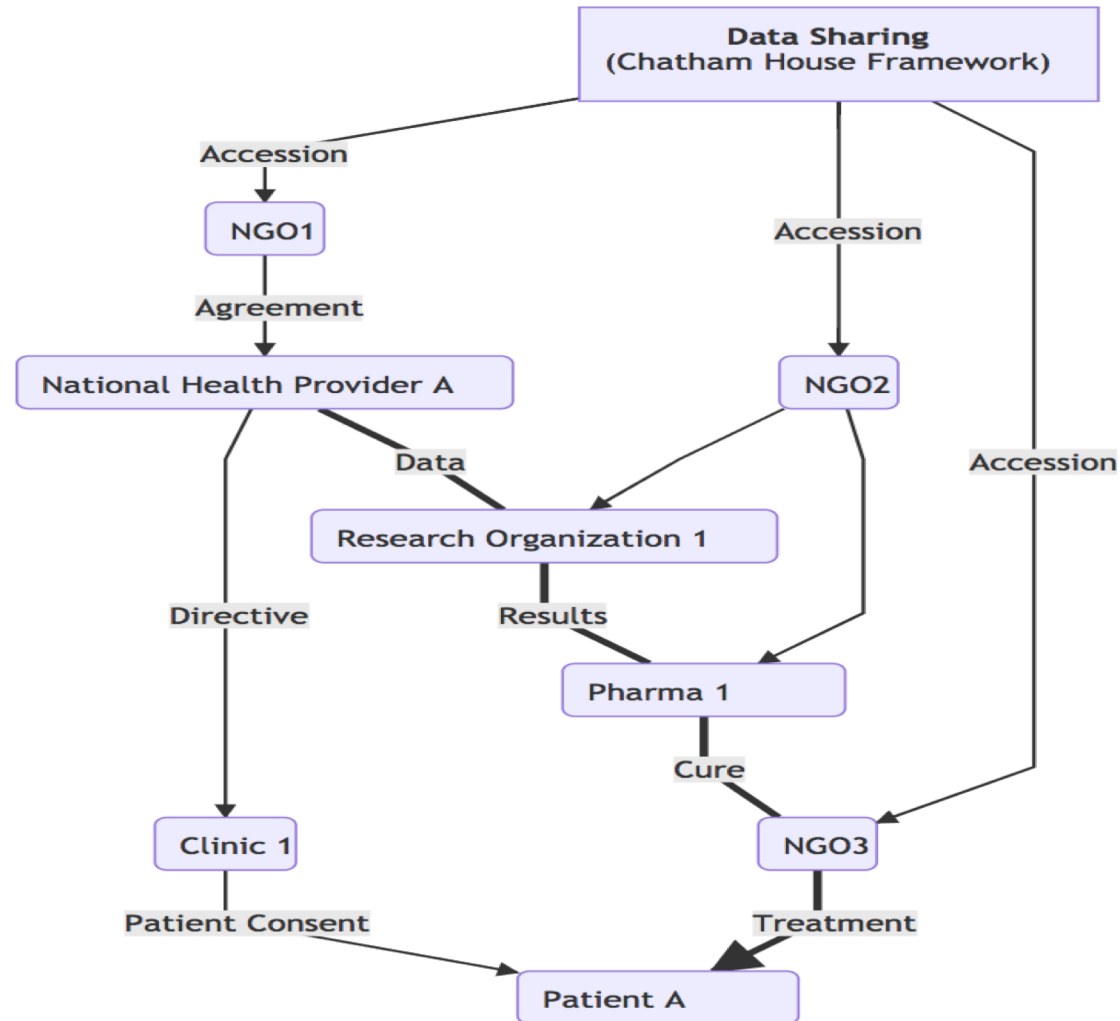

DATA LEGAL CHAIN

CONSENTS, DATA USE AGREEMENTS, FRAMEWORKS

Example chain of patient information based on Chatham House Framework for NGOs

Chain of permissions. Traceability and two-way communication.

Researcher – Patient

OPEN TRUST FABRIC

- Bringing together the business, governmental, technical and legal communities around common taxonomies.
- [Longer presentation](#)
